

Power Skids

Compact. Integrated. Deployment Ready.

Why MCG

- **Footprint Optimization:** Compact configurations for space-constrained environments.
- **Rapid Field Deployment:** Crane-ready systems that reduce onsite installation time.
- **Factory-Tested Integration:** Preassembled systems designed to improve commissioning efficiency.
- **Flexible Expansion Support:** Modular skid solutions designed to scale with demand.
- **Integrated Delivery:** Engineering, fabrication, integration, and service under one partner.

Overview

Mission Critical Group (MCG) designs and manufactures transportable, crane-ready power skids that deliver integrated electrical infrastructure in a compact platform built for rapid deployment. Pre-integrated, transportable power systems engineered for rapid deployment, reduced field labor, and scalable expansion, MCG power skids help simplify installation and accelerate time-to-power.

Solutions

- **Integrated Electrical Skid Systems:** Factory-assembled platforms housing switchgear, breakers, transformers, UPS, protection, and controls.
- **Low- and Medium-Voltage Applications:** Engineered LV and MV power distribution systems designed for mission critical performance.
- **Generator & Utility Interconnect Skids:** Pre-configured solutions for standby, prime, and distributed generation integration.
- **Protection & Controls Integration:** Pre-installed relays, monitoring systems, and automation components tested prior to shipment.
- **Custom Structural Frames:** Heavy-duty steel skid bases designed for transportability, seismic stability, and long-term durability.
- **Factory Acceptance Testing:** Fully tested systems prior to delivery to reduce field commissioning time and minimize startup risk.
- **Scalable & Repeatable Designs:** Standardized and custom skid platforms to support multi-site and phased deployment programs.

Powering What's Next

MCG power skids deliver compact, factory-built infrastructure that accelerates deployment and supports reliable power operations where speed, flexibility, and uptime are critical.
